

The Efforts Of The Arabs In The Recent Terminological Composition

Abstract:

This study aims to study modern Arab efforts concerned with formulating and publishing the term describing and evaluating them. These efforts are divided into individual and institutional ones, and the theoretical and applied aspects of them are presented in this study. Moreover, the researchers sought to check the efforts' role in setting up and legalizing the term issues. Thus, showing their main achievements, evaluating them, and illustrating their main features since they are pioneers in this area. Unfortunately, they did not reach the nature of follow-up movements of terms created by the centers of studies and publishing worldwide. Several new recommendations were suggested. They could be applicable if they are put in practice- to solve the issues of the term and what is derived from setting up unification, and publishing. In this case, Arab scientific unity could be achieved.
